

Assessing the impact of
digital technology
solutions in agriculture
in **real-life** conditions

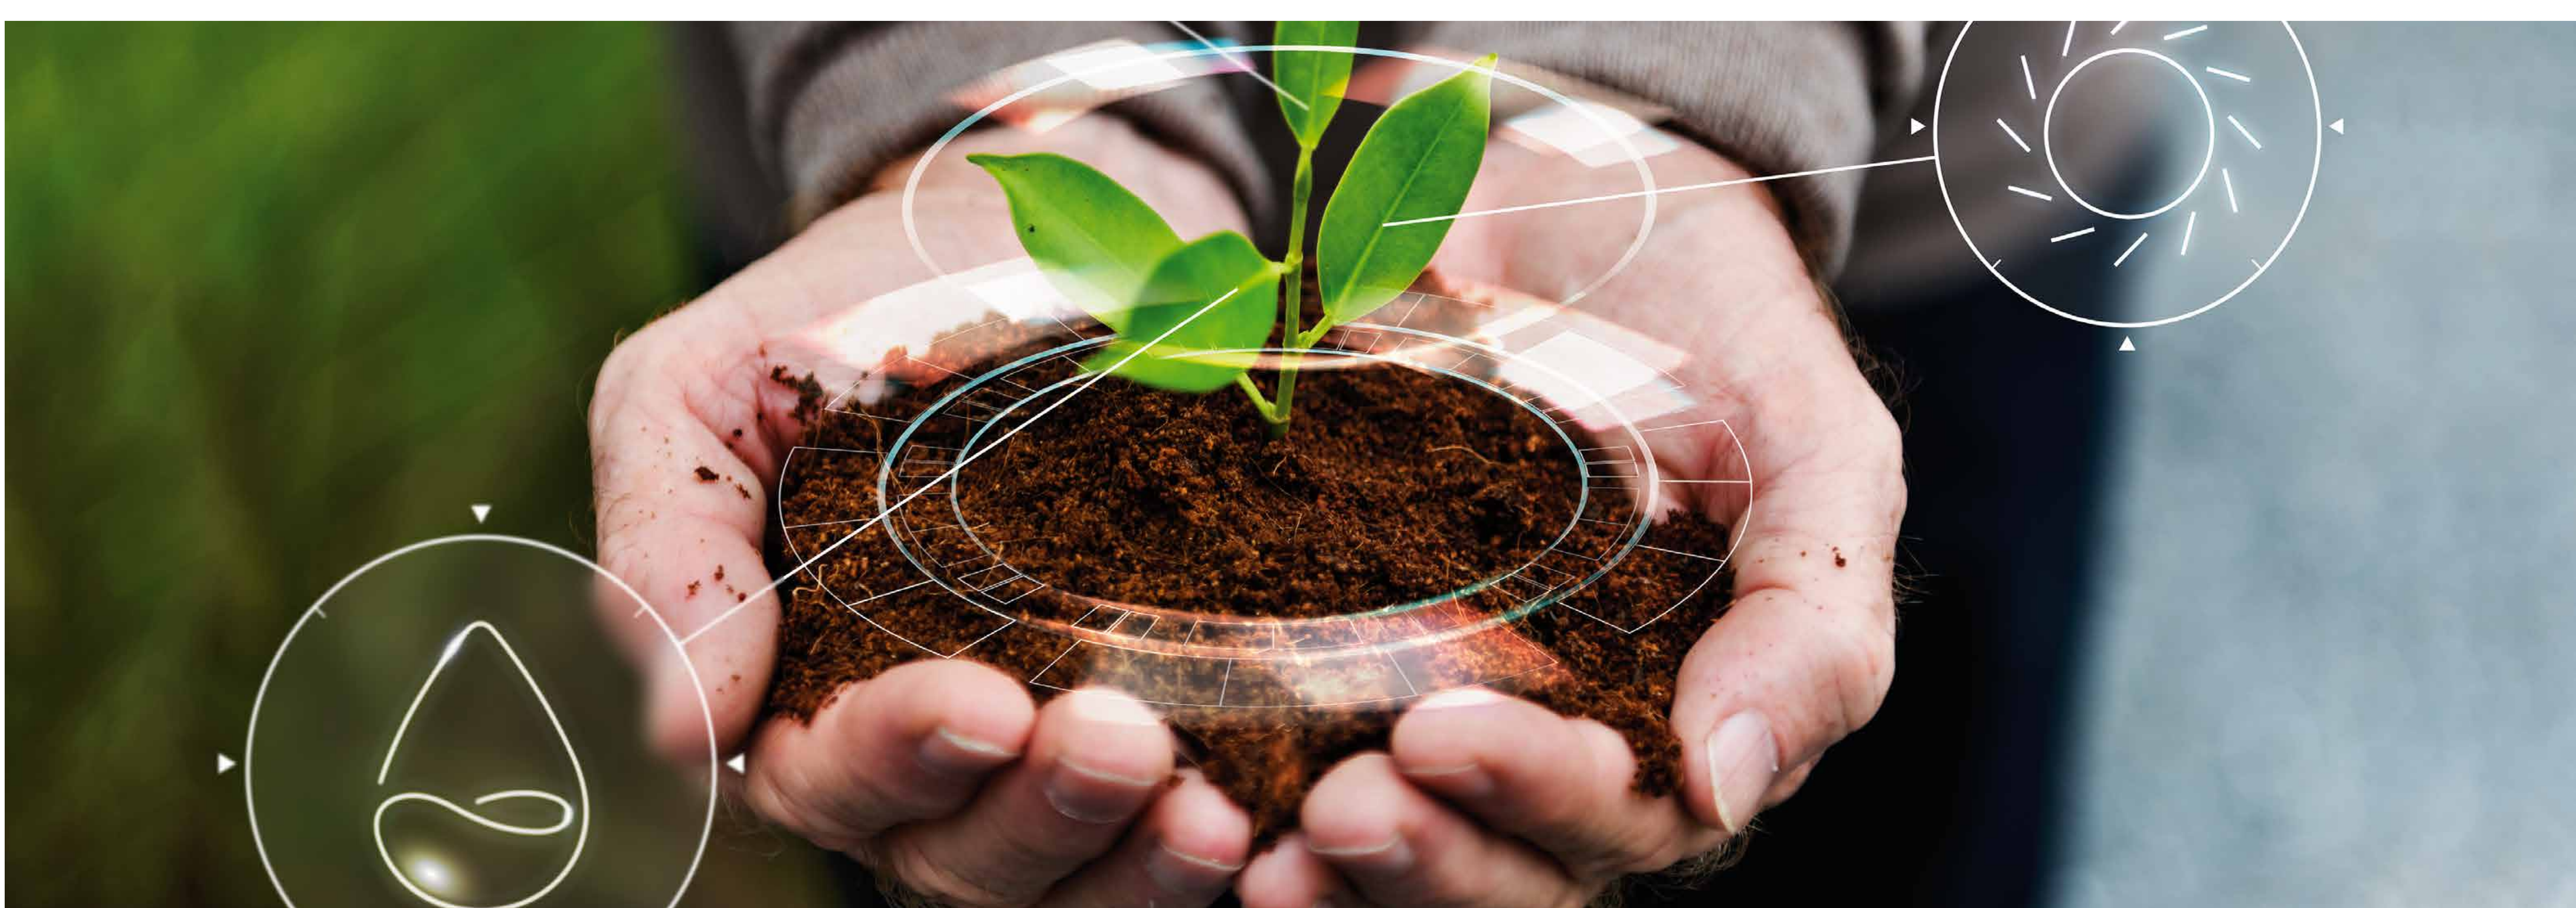

Digital Agriculture Technology Solutions (DATSs)

Range of DATSs include:

- Farm management information systems
- Controlled traffic farming technologies
- Reacting and variable rate technologies
- Recording and mapping technologies
- Robotic systems and smart machines

DATSs will be assessed and demonstrated
via 30 Test Cases under real life conditions.

Main goals of using DATSs

- Reduce inputs and costs
- Increase yields
- Increase environmental sustainability
- Reduce risks
